SUMMARY

I am a hands-on IT technician who learns by building, not just reading. I taught myself by standing up a full home lab from scratch and running it the way a real shop would: I plan each change, write it down, test it, and stay honest about what is done versus what is still ahead. Years of customer-facing work taught me to stay calm and solve problems for people under pressure, which is the heart of good help desk and tier-1 MSP support. I am organized, dependable, and quick to pick things up on the job. CompTIA A+ certified.

TECHNICAL SKILLS

Identity and Directory: Active Directory (domain controller, OUs, users, AGDLP security groups, Group Policy), DNS, Microsoft 365

Operating Systems: Windows 10 and 11, Windows Server 2022, Ubuntu, Debian, Rocky Linux

Networking: TCP/IP, DNS, DHCP, subnetting, VLANs, firewall rule design, OSI model, Wi-Fi standards

Virtualization: VMware Workstation Pro, network segmentation, snapshot and rollback workflows

Security: pfSense firewall configuration, deny-by-default rule design, WPA2 and WPA3, network segmentation

Tools and Platforms: ServiceNow, Jira, Microsoft 365, Git, Bash

Hardware: PC building, troubleshooting, RAID configuration, storage layout

PROJECTS

Active Directory Domain Lab

In progress, live and documented

- Built and operate a live Windows Active Directory domain (corp.lab) on Windows Server 2022: domain controller, organizational units, users, and AGDLP security groups.
- Joined a Windows 11 client to the domain and verified authentication plus a first Group Policy Object applying on login.
- Documented the build as a public, phase-by-phase guide; added departmental file shares and Group Policy folder redirection for home directories, with login scripts and help-desk drills the remaining phases.

Routed Two-Subnet pfSense Lab

Complete, documented

- Built a virtualized network in VMware Workstation Pro with pfSense CE 2.7.x routing two subnets across dedicated VMnets, segmenting LAN and lab traffic.
- Configured top-down firewall rules permitting targeted SSH between hosts while blocking general inter-subnet traffic, with logging on every rule for an audit trail.
- Verified the environment with SSH sessions, ICMP tests, and live firewall log captures from Ubuntu, Debian, and Rocky Linux hosts.

Multi-Distro Linux Server Lab

Ongoing

- Built and hand-configured Ubuntu, Debian, and Rocky Linux servers across three network-config models (netplan, ifupdown, NetworkManager).
- Run them as SSH targets and the cross-subnet test traffic the firewall rules act on, with named snapshots taken before every change.

EXPERIENCE

Shift Supervisor, SubDaze, Zionsville, IN

July 2025 to October 2025

- Supervised a small team during peak service hours, balancing customer service with operational throughput.
- Resolved customer issues directly without escalation in most cases, building communication skills directly applicable to help desk work.
- Managed cash handling, inventory verification, and end-of-shift documentation.

Deli and Prepared Foods Associate, Whole Foods Market, Indianapolis, IN

March 2026 to April 2026

- Front-of-house customer service in a high-volume retail environment.
- Maintained food safety and quality standards under time pressure.

EDUCATION AND CERTIFICATIONS

CompTIA A+ (220-1201 and 220-1202): Certified June 2026

CompTIA Security+ (SY0-701): In preparation

CCNA (200-301): Planned

Carmel High School, Graduated 2024
