SUMMARY

CompTIA A+ certified, with Network+ in progress. My hands-on experience comes from a home lab I built and document: a Windows Server 2022 Active Directory domain, a Proxmox VE server, a pfSense-segmented network, and Linux servers. I've built or rebuilt 6 to 10 PCs for other people and handle tech support for family and friends. I've also worked customer-facing jobs where I regularly ran the store solo.

TECHNICAL SKILLS

Systems: Windows 10 and 11, Windows Server 2022, Linux (Ubuntu, Debian, Rocky), macOS, Chrome OS
Active Directory: Users, security groups, Group Policy, file shares, folder redirection, login scripts, drive maps
Networking: TCP/IP, DNS, DHCP, VLANs, subnetting, pfSense firewall rules, network segmentation
Virtualization: Proxmox VE (VMs, containers, GPU passthrough, backups), VMware Workstation Pro, Docker
Hardware and support: PC building and repair, part diagnosis and replacement, printers, home Wi-Fi and networks
Tools: Git, Bash, PowerShell basics, Python
Familiar, not yet hands-on: Microsoft 365, ServiceNow, Jira

PROJECTS

Active Directory Domain Lab *In progress, documented*

- Run a Windows Server 2022 domain controller with a domain-joined Windows 11 workstation; create and manage user accounts, security groups, and Group Policy objects.
- Configured file shares, redirected home folders, login scripts, and mapped drives, each verified at user login.
- Every phase is written up as a public step-by-step guide, linked from my portfolio.

Proxmox Home Server *Running*

- Built a Proxmox VE host from spare parts and run virtual machines and containers on it: local AI with GPU passthrough, Home Assistant, DNS, and a game server, with restore-tested backups.
- Traced a no-power failure to a dead power supply, replaced it, and brought every guest back up.

pfSense Firewall Lab *Complete, documented*

- Built a two-subnet network routed through a pfSense firewall in VMware, wrote deny-by-default rules that allow only specific SSH traffic, and proved them with live tests and firewall log captures.

Linux Server Lab *Ongoing*

- Hand-configured Ubuntu, Debian, and Rocky Linux servers with each distribution's native network tooling, then completed and validated SSH hardening on Ubuntu (key-only login, ufw, fail2ban).

EXPERIENCE

Informal IT support, family and friends *Ongoing*

- Built or rebuilt 6 to 10 PCs for other people.
- Repair and upgrades, Wi-Fi and home networks, phone and account help, printers and smart home devices.

Team Member, SubDaze, Zionsville, IN *July 2025 to October 2025*

- Regularly operated the store solo, handling customers, POS, and closing tasks without on-site backup.
- Managed cash accountability and end-of-shift documentation.

EDUCATION AND CERTIFICATIONS

- CompTIA A+ (220-1201 and 220-1202): Certified June 2026
- CompTIA Network+ (N10-009): In progress. CCNA (200-301): Planned next
- Carmel High School, Graduated 2024
